

# ZIP

Innovative fabric sun protection system

## ANTI-GLARE AND HIGH TEMPERATURE PROTECTION

Zip is an ideal proposal for all those who seek effective protection from glare while maintaining visibility outdoors. This type of solution perfectly absorbs and reflects solar energy and UV radiation, which translates directly, among other things, into costs related to air-conditioning the room in summer. Zip's wide range of personalisation options makes it possible to create the right atmosphere inside the room, and thus directly influences emotions and temperature perception. Zip is also perfect as a glare shield in places with computer workstations.

## WIND RESISTANCE

The Zip is designed to provide a high level of stability and wind protection (wind load class 6 according to DIN 13659). Protection from winds up to 160 km/h is practically guaranteed thanks to the use of zippered guides. This solution does not require additional safeguards such as costly wind sensors.

## PERSONALISATION

Zip offers a great deal of scope for personalisation. Thanks to the innovative composite materials of the Serge Ferrari brand, it is possible to choose from many fabrics differing in colour and degree of shading. The 23 colours available in the offer give the possibility to adjust the roller blind to the individual style of the building and its interior. Zip is a fashionable accessory, which apart from its high functionality also perfectly fulfils its decorative and architectonic function. The big advantage is the small box with the possibility of both over-plaster and under-plaster installation.

## COMFORT OF USE

Zip ensures comfortable operation thanks to the use of modern SELVE and SOMFY motors. Roller shutters may also be operated in an automated manner as part of Smart Home solutions using appropriate drives. Zip can react to changing light and adjust it in an appropriate way even when the household members are not present.
