

# Exte Expert XT

Top-mounted roller shutters

QUALITY WITHOUT  
COMPROMISE

2  
YEAR  
WARRANTY

## ENERGY SAVINGS AND THERMALITY

The Exte Expert XT system complies with the German Energy Saving Ordinance standards - ENEC 2014, The roller shutters significantly improve the thermal insulation and allow you to maintain the temperature. The boxes are characterised by additional insulation of the side walls, which results in less heat loss. The same applies to lowering the blinds, closing them e.g. in winter, reduces energy consumption thanks to the insulation formed between the blind and the glass.

## STURDY INSTALLATION

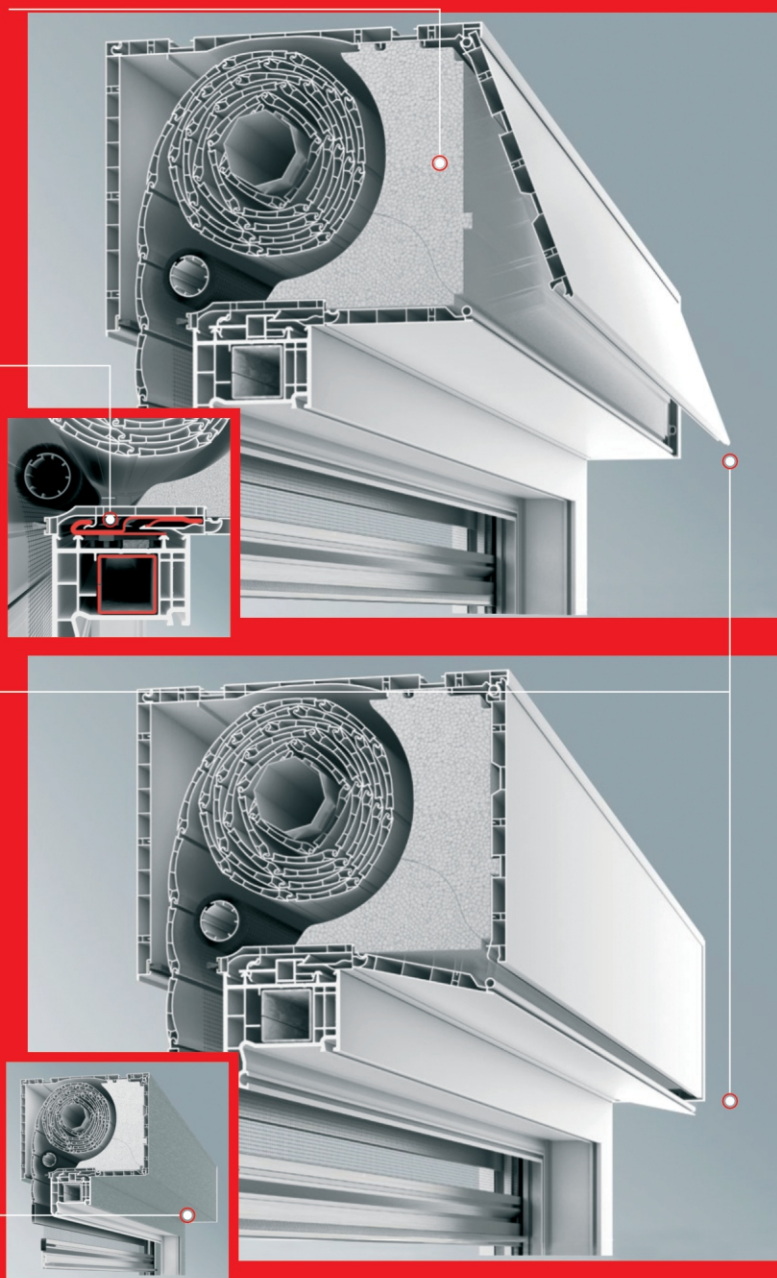

A special steel reinforcement is used inside the box. It allows for greater stability and statics, as well as the implementation of projects involving large windows width (up to 2.4 m) and building height (up to 8 m) without additional fixing to the ceiling. The runners are made of plastic and aluminium. Easy installation is also due to the mounting plates, adapted to each window system.

## EXCEPTIONAL FUNCTIONALITY

The Exte Expert XT roller shutter boxes are characterised by a multitude of solutions for revision openings - it is possible to use a revision from the inside or from the bottom. Depending on the revision method, the roller shutter installation is dedicated to various types of buildings. The revision from the inside is ideal for buildings undergoing renovation and refurbishment. The revision opening located at the bottom of the box allows it to be plastered and covered from the side of the room. This makes the box ideal for use in new buildings. Roller-shutters can be operated manually (hand crank, cord, belt) or electronically (e.g. by means of a remote control with a radio receiver). Additionally there is a possibility to integrate a mosquito net with a roller blind, which allows for effective protection against insects.

## DESIGN

Exte Expert extremely simple and classic box. A rich colour palette allows the production of blinds in various colours. There is a possibility of partial - only on the outside and on runners - and full - on both sides - foiling. Various variants of decorative foiling enable attractive design solutions when designing interiors and exteriors.

## SAMPLE COLOURS OF ALUMINIUM ARMOURS
